

TRUE ENTERPRISE RISK MITIGATION FOR ORACLE ON-PREM AND CLOUD APPLICATIONS

At Adjacent Solutions, Secured Managed Services means developing a comprehensive risk-averse support strategy that combines your unique security needs with industry best practices and measures. Our Oracle consultants collaborate with you to introduce proactive steps into your environment to reduce vulnerabilities, minimize security breaches, and enhance the overall security posture. By partnering with Adjacent we can help provide an end-to-end workflow solution to automate internal audit assessments, financial reporting certifications, and compliance with mandates such as SOX & GDPR.

MITIGATE ENTERPRISE RISK WITH SECURITY HARDENING

KEY BENEFITS

- Data Protection
- Compliance Regulations
- Mitigate Security Risks
- Prevent Unauthorized Access
- System Availability
- Incident Detection & Response
- Business Continuity
- Disaster Recovery
- Enhanced Trust & Reputation

ENHANCED ERP AND CLOUD SECURITY

Whether on-prem or in the cloud, Adjacent Solutions has the consulting expertise to enhance the security of Oracle ERP and cloud environments.

Our team of experts improves business security posture by implementing a combination of technical and organizational measures utilizing Oracle security guidelines, as well as industry best practices. We understand each organization has specific considerations for their unique environment. That's why we believe in working in a truly adjacent capacity with our customers to secure their entire Oracle technology environment.

SECURING YOUR ORACLE ENTERPRISE

Working together, we collaborate with your team to minimize the attack surface and strengthen the security controls in your environment. We provide continuous strategic guidance and support along with specialized tools to ensure the comprehensive protection of systems, data, and sensitive information.

We support customers with these Oracle ERP systems:

- Oracle E-Business Suite (EBS)
- Oracle Fusion Cloud
- Oracle PeopleSoft
- Oracle NetSuite

KEY COMPONENTS IN SECURING YOUR ENTERPRISE

Patch Management	Protect systems from vulnerabilities
Access Controls	Ensure authorized users
Encryption	Protect from unauthorized access
Auditing & Monitoring	Ensure compliance security measures
Network Security	Implemented measures/practices
Regular Vulnerability Assessments & Penetration Testing	Comprehensive security strategy
Security Awareness	Security education and training
Database Security Controls	Maintain overall security posture

ORACLE E-BUSINESS SUITE (EBS)

Securing Oracle EBS requires a combination of application configuration and comprehensive support. We implement technical measures and configuration practices, as well as provide ongoing monitoring and user education. We conduct regular security assessments, vulnerability scans, and penetration testing to address potential weaknesses and maintain a secure EBS deployment.

- Application Security
- Customize/Personalize
- Database Security
- Network Security
- Patching/Updates
- Secure Configuration
- Ongoing Monitoring/Auditing
- Compliance Requirements

ORACLE FUSION CLOUD

We collaborate with our customers to provide a secure foundation for Oracle Fusion Cloud, including security policies and training. Our consultants deliver a comprehensive approach that combines Oracle's built-in security features with proper customer configurations. Ongoing monitoring ensures the security of Oracle Fusion Cloud.

- Cloud Infrastructure
- Shared Responsibility Model
- Access Controls
- Security Configuration
- Continuous Monitoring

ORACLE PEOPLESOFT

Like EBS, Oracle PeopleSoft requires a combination of technical measures, configuration practices, and ongoing monitoring. We provide regular security assessments, vulnerability scans, and penetration testing to address potential weaknesses. As security advisors, we inform customers of industry trends to maintain a secure PeopleSoft deployment.

- Customizable Application
- Application-Level Security
- Enterprise Security Integration
- People Tools Security
- Patching and Updates
- Security Configuration
- Security Best Practices
- User Education/Awareness

ORACLE NETSUITE

Our team provides a secure infrastructure for NetSuite. We collaborate with customers to configure and manage their NetSuite instance securely by implementing strong user access controls, reviewing security configurations, and educating on security best practices. Regular security assessments and vulnerability scans address potential risks.

- Cloud-Based Security
- Configuration Options
- User Access Controls
- Multi-Company Architecture
- Compliance & Certifications
- Built-In Monitoring/Auditing
- Continuous Updates/Patching
